

Malaria Deaths in Africa: 2000-2014

Insight One: Kenya

Death per year due to malaria in Kenya significantly decreased since 2011. By clicking on Kenya in this dashboard (Figure 1), we can see that it had the highest average of malaria death per year in Africa between 2000 and 2014. In 2003, the number of deaths per year was exceeding 50,000, which is the highest number in Kenya at that period. After that, in 2004, the number was halved to be 25,000 death per year but then, in 2005, the number rise again to 45,000 death per year. From 2011 and forward, the number of deaths per year was highly decreased to lower than 1000.

Insight Two: Democratic Republic of the Congo

Death per year due to malaria in Democratic Republic of the Congo highly increased starting from 2004. By clicking on Democratic Republic of the Congo on this dashboard (Figure 2), we can recognize that number of deaths per year continuously increased between 2004 and 2013. In 2013 the number was exceeding 30,000 deaths per year. Besides, we can recognize that there were slight decreases in the number of deaths in 2014. Before 2004, from 2003 backward, the number of deaths per year was below 5000.

Insight Three: Algeria

By clicking in Algeria in this dashboard (Figure 3), we can recognize that Algeria has the lowest daily and yearly average of deaths due to malaria in Africa. The highest number of deaths per year was 5 in 2010. On the other hand there are no cases recorded in 2008 and 2012. In this dashboard we can see as well that in 2001, 2009, and 2011 the number was one death per year. In 2000, the number of deaths per year was two while in 2013 the number was three deaths per year.
